Radiation Glasses

Who are HSL?

Hospital Services Limited (HSL) are proud to offer one of the widest array of radiation and laser/radiation glasses, in partnership with SFX-Ray. We offer a complete line of high quality CE-Certified radiation glasses. The glasses are made with Schott SF-6 HT Lenses which are the best on the market. The glasses are CE-Certified and meet with EU Regulations.

Laser beams and scatter radiation pose a real risk to the on-going health of your eyes, and are often not considered when wearing PPE. HSL offer safety glasses from both a comprehensive economical range and also from some premium brands.

Our extensive ranges of frames come in different sizes, different weights and some offering different colour choices, so there will be a frame that suits every wearer

All the lenses come with 0.75pb lead protection as standard. If the frame has built in side shields, they are 0.50pb as standard.

P = Plain lenses. Standard lenses with no prescriptions.
SV = Standard Vision. Lenses with a standard single vision prescription.
VF = Varifocal lenses. Varifocal lenses transition between short and long sighted.
B = Bifocal lenses. Bifocal lenses have a "half moon" portion for close up work.

FRAME SIZE

- S = Small
- M = Medium
- L = Large
- XL = Extra Large

SMALL = Lens 42 - 48 Bridge 16 - 17 Arm 130 - 135
MEDIUM = Lens 49 - 52 Bridge 18 - 19 Arm 136 - 140
LARGE = Lens 53 - 58 Bridge 20 - 23 Arm 141 - 150
NB: all frames over a 60 lens are extra large

OPTIONS

AR = Anti-Reflective coating. Eliminates the distracting glare that can be produced by light when it reflects through your lenses.

ARF = Anti-Reflective with Super Hydrophobic Coating. Hydrophobic anti-fog coatings are soap-based and work by repelling and spreading the fog moisture as it hits the lens. This is a Fog Reducer - it does not eliminate fogging which is just basic physics but does help to reduce it.

E = Engraving. The legs of glasses frames can be engraved with the name of the owner. This can be done on the outside of the right or left arm or on both sides.

LEP = Lateral Eye Protectors. LEP's are a slide on 0.50pb lead side shield. They come in three sizes and fit every frame choice.

Lens.

It represents the horizontal width of the lenses. A normal lens diameter falls in the range of 40mm to 62mm.

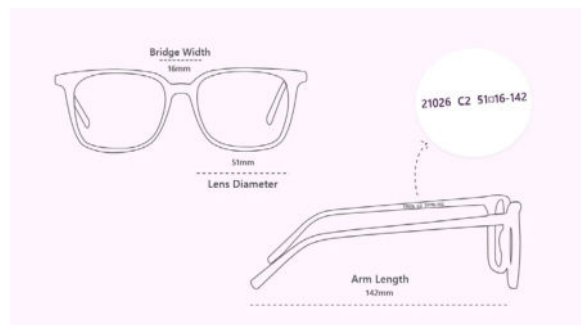

Bridge. It suggests the size of the nose bridge of the frames.

A normal bridge width ranges from 14mm to 24 mm.

Arm. It's the measurements of the temple length, starting from the hinges to the end of the temple tips. A normal arm length ranges from 120mm to 150mm.

If someone already wears glasses always check the measurements against the existing frames. The markings may be hard to read as they can wear off with sweat or general movement.

You can measure the frames roughly yourself to get an idea of what size frame to go for.

Radiation Protection

At HSL, we specialise in SFX Ray advanced radiation protection solutions, tailored for various areas. Our high-quality shielding products, including lead aprons, gloves, and barriers, ensure safety during X-ray procedures. Designed for durability and comfort, our protective gear meets industry standards, reducing exposure risks while maintaining efficiency.

Trust HSL to provide the best in radiation safety for your needs.

Lead Aprons

There is a variety of both lead and lead-free aprons available, designed for different protection levels.

Accessories

Accessories available include thyroid collars, caps, and lead markers, all designed to enhance protection and ensure safety during radiation.

Screening Service

Racks

Racks are available to hang aprons on, helping to maintain their shape and keep them in good condition by preventing unnecessary wear and tear.

Our Products & Solutions

Established since 1962, HSL have been transforming healthcare delivery and improving patient outcomes.

As a leading provider of healthcare technology solutions, we are committed to bringing cutting-edge innovations that empower healthcare providers, streamline operations, and enhance the overall patient experience. HSL can transform your healthcare organisation with our expertise across various specialised areas.
